EXPERIMENT 02

Account setup and platform exploration

Aim

Set up an authorized Zoho Creator workspace and identify the components used to build the Vehicle Service & Repair Request Management application.

Procedure

1. Sign in to your institution-approved Zoho account, verify email, enable multi-factor authentication if allowed, and note the data center. Do not record passwords or tokens.
2. Record plan or trial, user count, record limit, API allowance, and whether environments are available.
3. Create the app 'Vehicle Service & Repair Request Management'. Record the app link name, locale and time zone.
4. Explore edit mode and live mode. Identify forms, reports, pages, workflows, users, connections and logs.
5. Create a temporary Sandbox_Check form with one text field, submit one synthetic record in live mode, view it in a report, then delete the form after checking dependencies.
6. Draw: Browser/Mobile -> Creator UI -> Permissions and Workflows -> Creator Data, with an optional outbound connection.

Implementation and verification

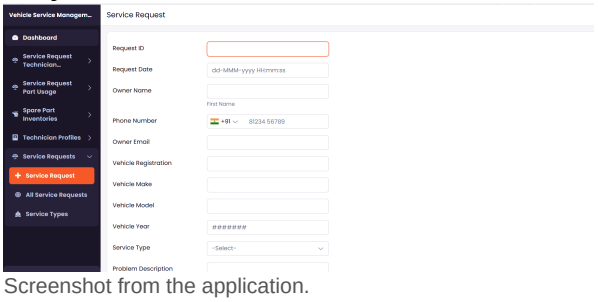

Component	What to identify
Form builder	Field type, display name, link name, required and unique settings.
Workflow editor	On Validate, On Success, schedules, custom functions.
Reports and pages	Source form, filters, record detail, dashboard elements.
Administration	Users, permissions, connections, logs, environments.

Evidence and testing

E02: redacted app overview, architecture sketch, plan checklist, one temporary test record before cleanup. Confirm a logged-out user cannot open private data.

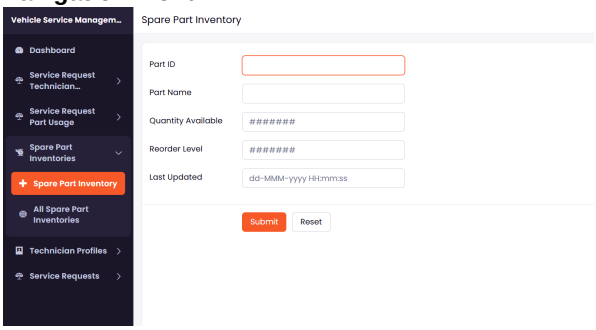

Application images and explanation

Application navigation menu and Service Request entry form

Screenshot from the application.

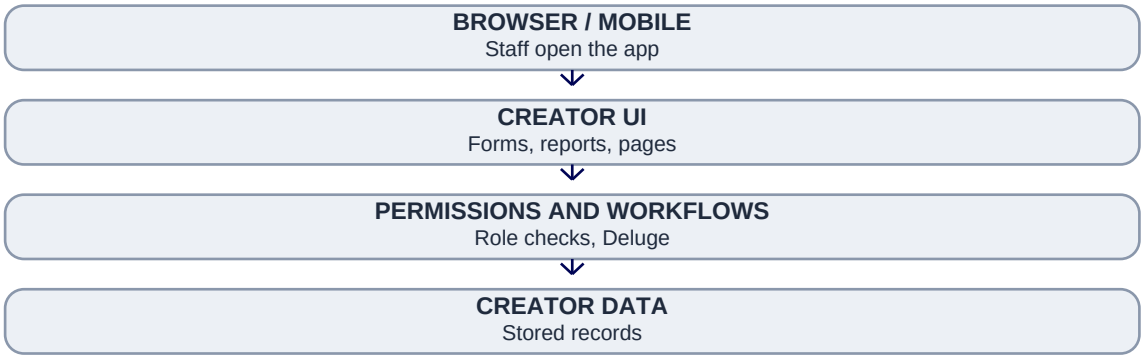

Spare Part Inventory form showing the grouped navigation menu

Screenshot from the application.

Process diagram

Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Account and private app are ready, a synthetic record can be saved and retrieved, and each component's role is explained. Plan-dependent features are recorded as found.
